Experiment - 13

10/22 Implement your own ping program

Aim: To implement our own ping program.

Code:

```
import os
import platform
import subprocess

def ping(host = "google.com", count = 1):
    param = "n" if platform.system().lower()
        == "windows" else "-c"
    command = ["ping", param, str(count),
               host]
    try:
        output = subprocess.check_output(
            command, universal_newlines = True)
        print(output)
    except Exception as e:
        print(f"Ping failed:
              {e}")
if __name__ == "__main__":
    ping("8.8.8.8")
```

Output:

Pinging 8.8.8.8 with 32 bytes of data:

Reply from 8.8.8.8: bytes = 32 time = 6ms TTL = 11

Reply from 8.8.8.8: bytes = 32 time = 9ms TTL = 11

Reply from 8.8.8.8: bytes = 32 time = 5ms TTL = 11

Reply from 8.8.8.8: bytes = 32 time = 9ms TTL = 11

ping statistics for 8.8.8.8:

Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),

Approximate round trip times in milli-seconds:

Minimum = 5ms, Maximum = 9ms, Average = 7ms

Result:

Thus the ping program was successfully executed
