

Study of Cisco Packet Tracer tool.

Aim: To study the Packet Tracer tool to analyse the behaviour of network devices.

Procedure:

(1) From the network component box, click and drag drop the below components.

(a) 4 Generic PC's and one hub.

(b) 4 Generic PC's and one Switch.

(2) Click on Connections:

(a) Click on Copper Straight-Through Cable.

(b) Select one of the PC and connect it to Hub using the Cable. The link LED should glow in green, indicating that link is up. Similarly connect remaining 3 PC's to HUB.

(c) Similarly connect 4 PC's to switch using Copper Straight-Through cable.

(3) Click on the PC's connected to hub, go to desktop tab, click on IP configuration and enter an IP address and subnet mask. Here the default gateway and DNS server information is not needed as there are only two end devices in the network.

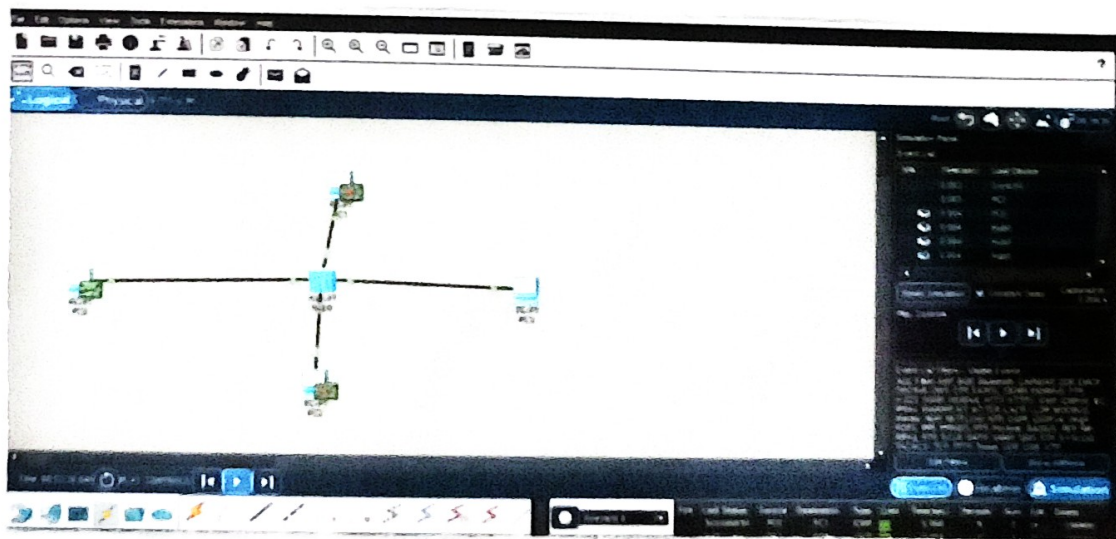

click on the PDU (message flow) from the common tool bar,

(a) Drag and drop it on one of PC (source) and then drop it on another PC (destination) connected to hub.

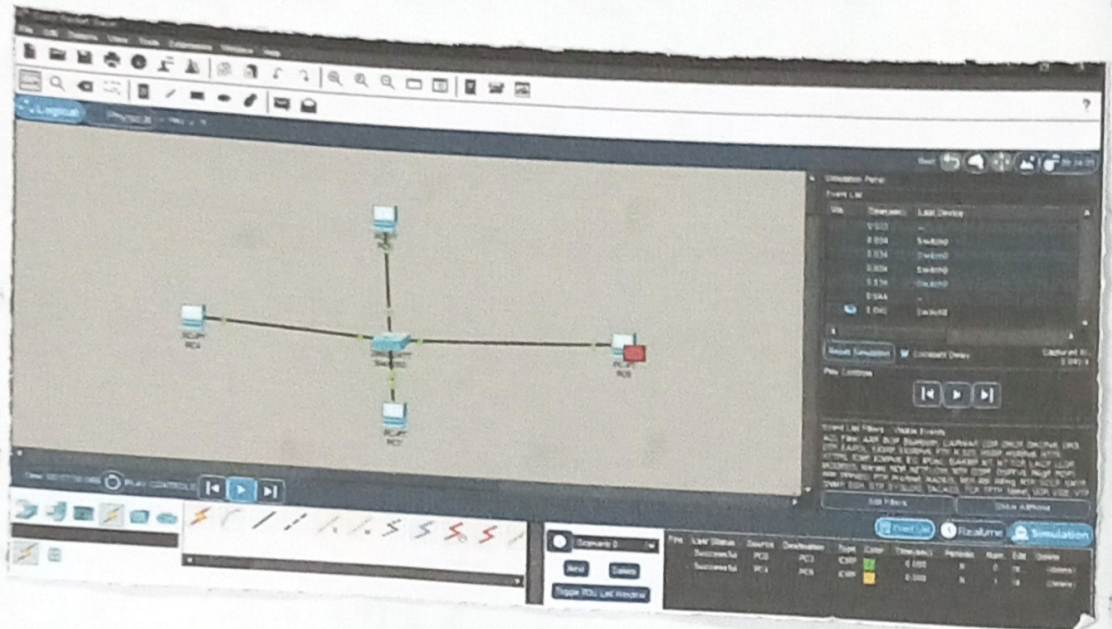

(4) Observe the flow PDU from source PC to destination PC by selecting realtime mode of simulation.

(5) Repeat step 3 to step 5 for the PC's connected to the switch.

(6) Observe how hub and switch are forwarding the PDU and write your observation and conclusion about the behaviours of switch and hub.

Hub

Switch

[Red signature]

[Red checkmark]

Result :

Thus the hub, switch were performed on cisco packet tracer
